work and we deal instead with rational approximation arguments Let p_n, q_n be the approximants of $\alpha \in \mathbb{R} \setminus \mathbb{Q}$ Let (12) $\beta = \beta(\alpha) = \limsup \ln q_n + 1$ q_n The relation between $e^{\beta n}$ and λ will play an important role in our argument, and will decide whether we approach the problem from the Diophantine side or from the Liouvilian side As discussed

Automatic Aggregation by Joint Modeling of Aspects and Values

We present a model for aggregation of product review snippets by joint aspect identification and sentiment analysis Our model simultaneously identifies an underlying set of ratable aspects presented in the reviews of a product (eg, sushi and miso for a Japanese restaurant) and determines the corresponding sentiment of each aspect This approach

Diabatic gates for frequency-tunable superconducting qubits

Here, we report diabatic gates that have minimal leakage By synchronizing the entangling parameters, leakage channel, and the weakly frequency-dependent inter-qubit coupling, one can achieve high fidelity gates close to the speed limit set by the interaction strength We demonstrate our approach ...

Coherent Josephson Qubit Suitable for Scalable Quantum ...

Here, we demonstrate a new design for a fully planar superconducting qubit, based on the planar transmon [11,12], with energy coherence times in excess of 40 ns Our approach balances coherence, connectivity, as well as fast control The qubits are frequency tunable, which allows the implementation of fast two-qubit gates: a CONTROLLED-
